

# Asset ID Collection

**Your requirements as a Data Controller under GDPR state you should know exactly where an asset is at all times, thus protecting the data it contains.**

Unless you can provide a complete inventory, the days of us just loading equipment for disposal into a van are gone.

You need to evidence that you've taken all reasonable steps to protect your data, and now we can provide you with an accurate inventory before any item leaves your site. Our Asset ID Collection saves you time and effort – but most importantly ensures you meet your GDPR obligations. It's part of our truly end-to-end Secure IT Asset Disposal service.

Disposal and GDPR'**  
factsheet

## What is it?

Asset ID Collection is our unique process of identifying and recording assets that are ready for disposal. It's a key tool from Blackmore Ricotech that ensures you protect sensitive data and meet your obligations under GDPR.

To us, it's not an option. It's part of our service when we're your contracted ITAD.

## Core risks:

- Personal data on redundant IT equipment.
- Configuration data on equipment that might give someone access to any personal data.
- IP or other sensitive company, client, supplier or staff data.

## Why is it important?

Under GDPR you need to show you have 'done enough to protect' your data. Choosing Blackmore Ricotech to dispose of assets will mitigate your risk. Our Asset ID Collection ensures you remain compliant with a thorough audit trail of every asset undergoing disposal.

We then record a unique identifier – which is either your own company asset number or the asset's serial number – so you have a record of where each of your assets has gone.

Our service adheres with your data protection impact assessment.

## The on-site auditing process

Our Asset ID Collection process is just the start. Our unique Barcode IDs allow each item to be fully tracked:

- back to our facility
- through our Government approved data sanitisation process
- through the most Environment Agency sustainable processes
- and through to its final destination, to achieve and record the maximum value.

The entire process is audited as part of our ADISA accreditation.

If you have any doubt about secure IT asset disposal and your obligations under GDPR, please contact us. **Call 0800 880 3678.**
